

Task 1

EventFlow will be managing and running the operations of Mystifare. Mystifare is a medieval themed renaissance fair that connects lovers of the historical context. It is a major outdoor gathering that simulates an old English village where attendees can explore the grounds, enjoy scheduled performances(plays and music), view attractions, purchase from vendors selling merchandise and food, participate in organised games such as jousting. The fair runs over the span of two days and thus accommodations in the form of tents are available for rent, but this is not compulsory. To ensure the safety of attendees, security teams named “The watch” and FirstAid are available across all zones. Due to the scale of the event operations need coordination and require the use of the composite and observer design patterns. Many aspects of the fair are affected by weather-changes. There is limited capacity for major zones and the fair in total, Vendors are required to rent stalls with differing rates etc.

Concrete Event units

- Performance: A single scheduled musical or theatre performance which is affected by schedule changes and evacuation alerts
- FoodVendor: Sells food and drink items, Allergen listings must be made available.
- MerchVendor: Sells costumes, souvenirs and other merchandise. No allergy requirements needed
- Attraction: A landmark attendees can view. No schedule required
- Game: An interactive activity
- Tent: A camping unit able to hold a maximum of two attendees at a time
- The Watch: security detail which manages attendees
- FirstAid: Attends to injuries and medical emergencies. Remains active throughout the even

Grouping

Mystifare simulates a village and is thus divided into four major zones, The North, South, East and West. These zones may contain sub-zones where related event units are found, e.g. Entertainment zone, Accommodation zone etc.

- Zone: the top-level composite. Each zone aggregates capacity and status across everything within it and is the first point of contact for a fair-wide notification from the control centre.
- Stage: a composite nested inside a zone's entertainment area, grouping all performance units happening at that specific stage so they can be reported on, and paused, together.
- Accommodation:a composite nested inside a zone, grouping Tent units so overnight capacity and welfare can be tracked as a unit distinct from the day's entertainment

Component: EventComponent

Composite:EventZone

Concrete leafs: Performance, MerchVendor, FoodVendor, Attraction, Game, Watch, FirstAid

Subject: Control

ConcreteSubject: EventControl - creates alerts and notifications that are reacted to.

Observer/ Concrete Observer: generally the concrete leaves react to changes but that is up to the person in charge of observer
